

# Woocommerce Installation Manual

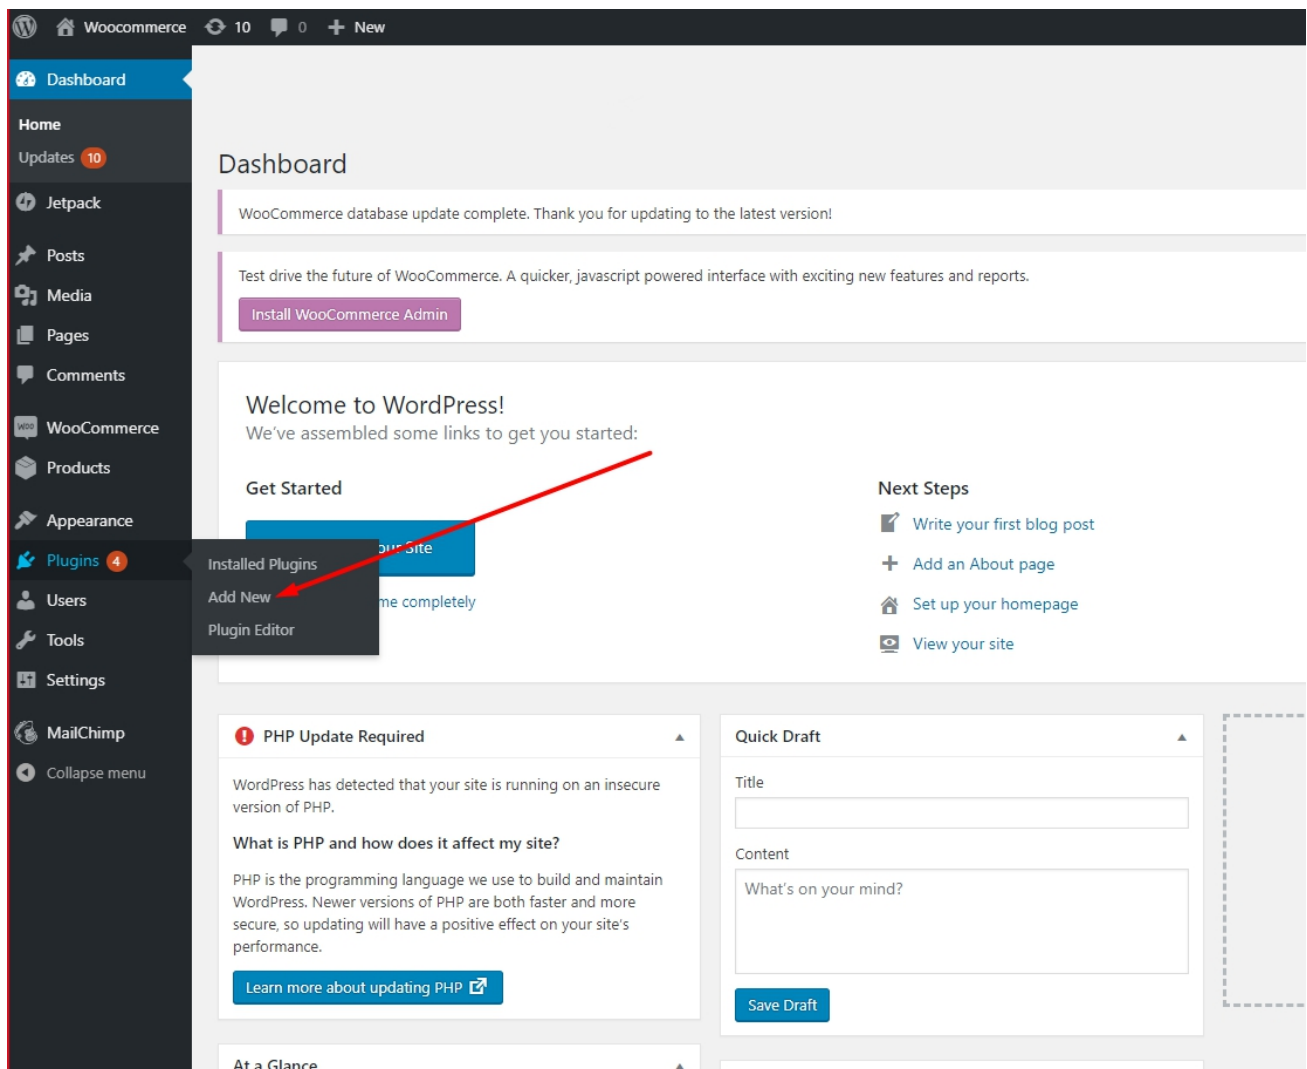

## Overview

You will need API keys for the module to connect with Novatti Payments. API keys are available in [the administration panel](#): you must register a free account to get the keys for testing integration.

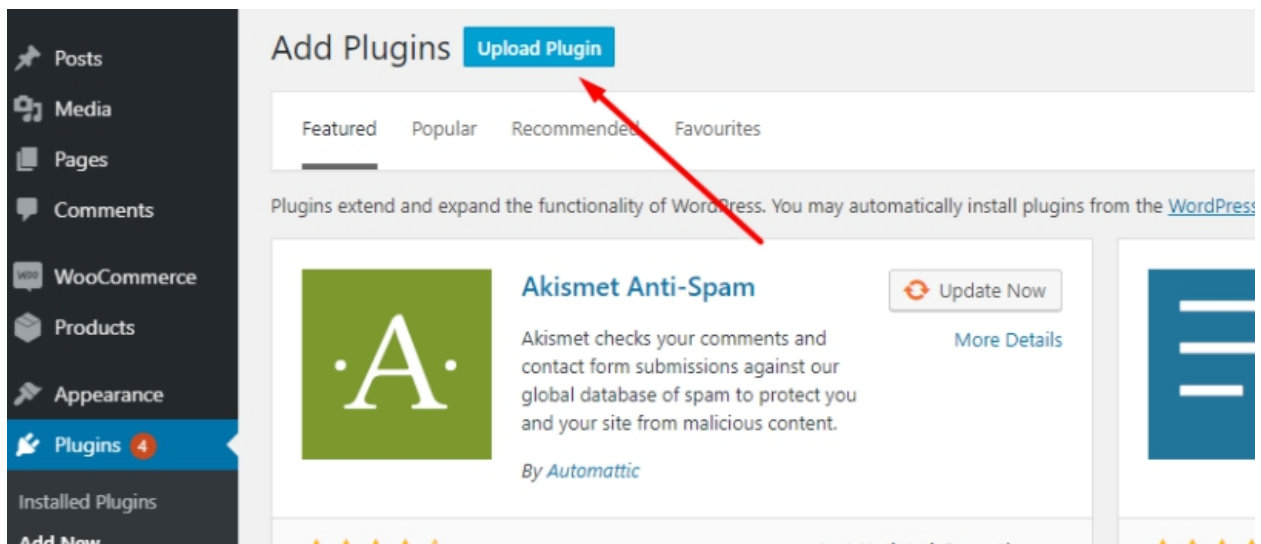

To start accepting real payments, you must apply for a verified account. Once your account is verified, replace testing keys with the live ones, and you are all set for accepting payments.

## Step by Step Guide

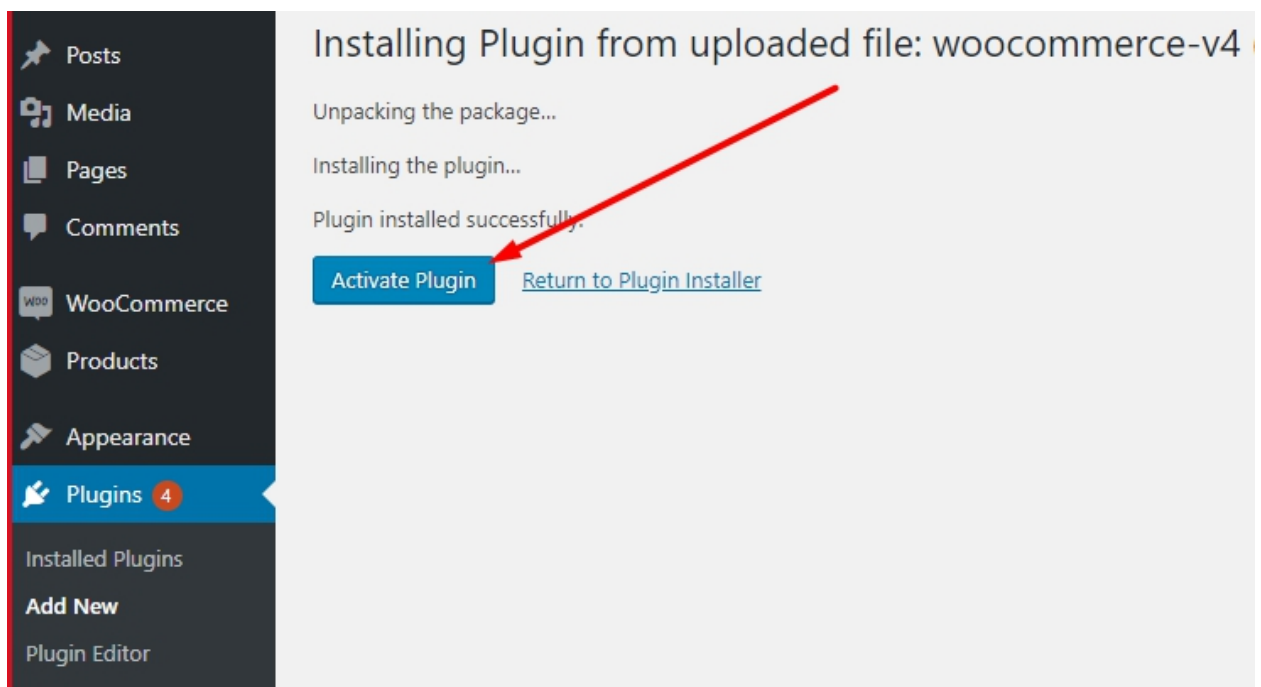

1. Go to the Woocommerce administration panel and click on the “Plugins” - “Add new”.

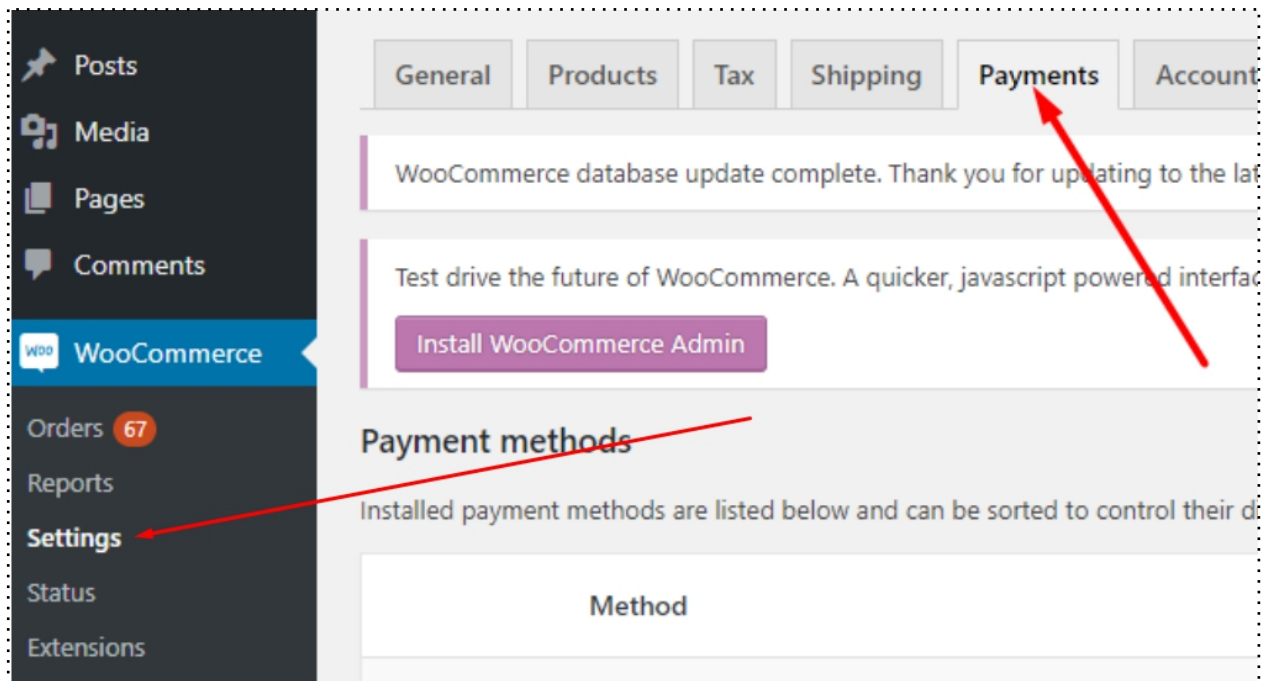

2. Click on the “Upload Plugin” button. Then choose and upload from your PC Woocommerce downloaded module archive and click on “Install now”.

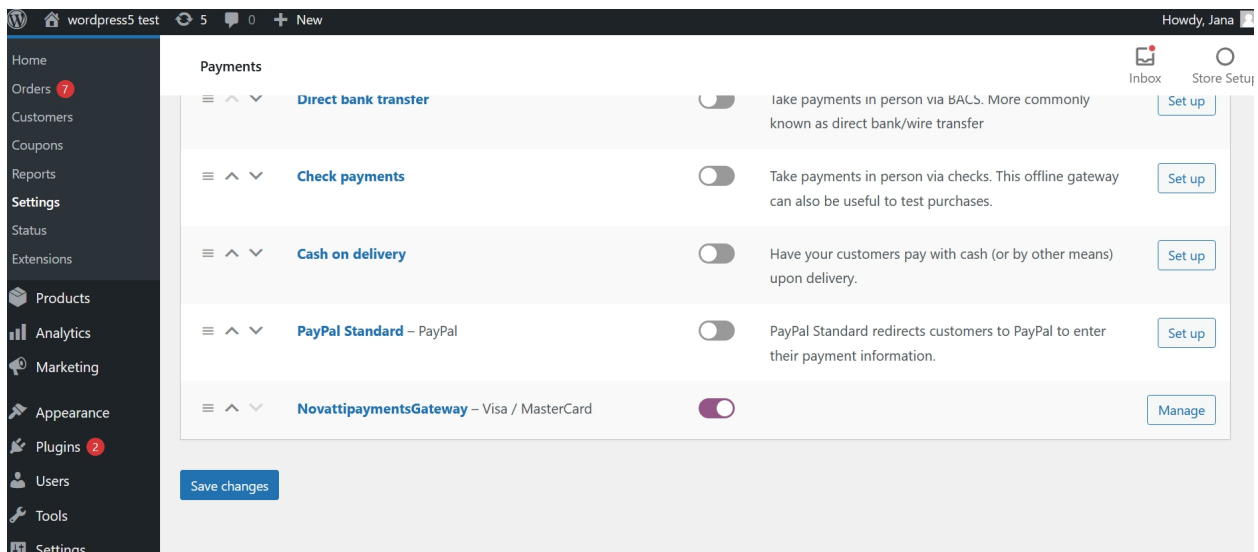

3. After downloading module archive, click on “Activate plugin”. Now the plugin is activated.

4. To set up module, click on “Woocommerce” - “Settings”. Choose the “Payments” tab.

5. On “Payments” tab find the Novatti PaymentsGateway and click on the “Manage” button.

6. The module provides several parameters that should be filled out for it to work correctly:
- **Public Key** – available in the API section [the administration panel](#);
  - **Secret Key** - available in the API section [the administration panel](#).

You also need to choose “Enable API” and “Debug log” parameters. “Debug log” provides the ability to log Novatti Payments Gateway events.

If you want to locate the payment form on your website you need to choose “Build-in payment form on your website.” parameter.

Iframe payment form.

☒ Build-in payment form on the website.

Payment form will be located on your website.
